

2022 Digital Health Most Wired Data Shows Providers Are Transforming Care Delivery

The College of Healthcare Information Management Executives (CHIME) recognises 18 organisations who achieved commitment and excellence in digital health, having been awarded at the highest level of the CHIME [Digital Health Most Wired Survey](#) with level 10 certification.

The survey grew by 20% this year, representing over 38,000 facilities. Providers include organisations that support patients across the continuum of care: acute care, ambulatory care, and long-term/post-acute care (LTPAC)

Greater analysis of the data reflects the achievements that facilities have made to change the way care is delivered—boosting digitalisation in areas such as patient engagement, clinical quality, security and data analytics.

H. Stephen Lieber, Chief Analytics Officer at CHIME, said, “Their pioneering performance inspires other organizations by example. Patients in communities around the world receive better care because these providers drive change through digital transformation, as they have proven through their success in this rigorous survey”.
