Hunter New England Local Health District, Australia

HNE have started their rollout of EMR, and DT Research and its partner HPA (Hospital Products Australia) have suppled 11 DT592BU Medical-Cart Computers to this Local Health District. They are currently utilizing their eMED carts for The Clinical Applications Portal or CAP as it is commonly known. A web based application which displays patient documents, demographics and episode information. Clinical Documentation can also be created in CAP. Digital Medical Records, AusLab (pathology) and PACS (Imaging software) are all available through CAP. Pathology, Radiology and Cardiology results, discharge referrals, patient correspondence, ICU summaries, Maternity and Community Health (CHIME) information are all accessible in the one place.
