

Indonesian Island Sets Up Innovative PHB

An Indonesian island is upping the innovation stakes with a **healthcare Blockchain project for local citizens** .

Batam, located a short boat ride from Singapore, is working with a group of tech partners on a [Public Healthcare Blockchain \(PHB\)](#), leveraging world-class data analytics tools at a secure data centre.

The island, which has a population of just over 1.2 million, is implementing the project through the **BP Batam Hospital Authority** and dClinic. Deloitte South East Asia and JP Consulting are providing project management and clinical governance expertise.

The aim is to prove the effectiveness of a secure, dependable and flexible **Longitudinal Electronic Health Record (LEHR)** that's made available for patients and consumers.

The Indonesian authorities are watching the project closely with a view to rolling it out across the whole of Indonesia.

"Bringing these companies together shows how exciting [Blockchain can be for healthcare](#). We aim to show the rest of the world how Blockchain can be leveraged to offer proactive and **positive outcomes for consumers** across Indonesia," said Dr. Richard Satur, CEO of dClinic.

dClinic is regarding the project as a litmus test for a wider implementation of **Blockchain solutions** with other governments and organisations around the world.
